How does a grid connected solar inverter system work?
When the power generated by the system exceeds the load demand,the excess power can be delivered to the grid,realizing "net metering". Conversely,when the system does not generate enough power to meet the load demand,the required power can be purchased from the grid. Grid-connected solar inverter system have many advantages,including:

What is a grid tie inverter?
On grid tie inverter is a device that converts the DC power output from the solar cells into AC power that meets the requirements of the grid and then feeds it back into the grid, and is the centerpiece of energy conversion and control for grid-connected photovoltaic systems.

What is the control design of a grid connected inverter?
The control design of this type of inverter may be challenging as several algorithms are required to run the inverter. This reference design uses the C2000 microcontroller(MCU) family of devices to implement control of a grid connected inverter with output current control.
