What is a 2420 inverter?

The 2420 combines a rectifier and inverter into a stand-alone drive intended for motoring-type loads. The 2420 can also furnish the bus for a limited drive system of 2400 inverter units. An input rectifier section is used on the nonregenerative 2400,2420,and 2450 drives to convert the fixed AC line voltage into a DC bus voltage.

What is a 2490 converter & 2420 drive?

The 2490 converters and 2420 drives incorporate a link choketo reduce line harmonic currents. Higher-power 2490 units provide optional six-pulse (three-phase) or twelve-pulse (six-phase) connections to meet power quality requirements.
