What is a PV AC combiner box?

The new PV AC combiner boxes have been designed for PV systems with string inverters in trackers or fix tilt systems. The product portfolio is suitable for inverters from 60 kW up to 200 kW and support voltages of 400 V, 690 V or 800 V AC. The combiner boxes allow to collect from 2 up to 6 string inverters in one single cabinet.

What is an AC combination box?

The AC Combiner Box is a critical protection and distribution device in photovoltaic (PV) string inverter systems. It connects multiple PV string inverters to the main AC power grid safely and efficiently. Designed to meet the demands of outdoor installations, it offers IP65 protection, ensuring durability in harsh environmental conditions.

What size PV combiner box do I Need?

The size of the combiner box depends on the number of PV strings and the current and voltage ratings. Calculate the total input current and voltage to ensure the box can handle the load safely and efficiently. Choosing the right size PV combiner box is one of the most important decisions in designing a solar power system.

How do I choose a solar combiner box?

Ensure that the box has enough input and output terminals to accommodate all of the PV strings and connections. Future Expansion: Consider the possibility of expanding the solar array in the future. Choose a combiner box that has enough capacity to accommodate additional PV strings.

If you're diving into the world of PV power stations, you already know the big players: panels, inverters, racks. But today, let's talk about the unsung heroes - the DC cables, combiner ...
