Can a portable power station be used as an uninterruptible power supply?

Yes, a portable power station can be used as an uninterruptible power supply. Many portable power stations come with UPS features, like automatic switchover when power loss is detected.

How many devices can a portable power station run?

So long as your portable power station has the right ports and enough capacity, it can run a massive range of devices, including phones, laptops, and desktops. Higher capacity units will also let you power large home appliances and charge electric vehicles.

Does a portable power station have a 6000W inverter?

More importantly, no other portable power station comes close to touching its 6,000W inverter, and when you put two of these together, you end up with a 12,000W inverter, which means when the power goes out, you can still run your central air conditioning, fridge, microwave, hot tub, and probably the neighbor's house, too.

How much power does a portable power station hold?

On the small end, portable power stations hold around 300 Wh (like the little EcoFlow River 3 Plus, our Best Budget pick). These little ones are generally smaller than a lunchbox and good for tasks like recharging laptops and speakers, LED lighting, and small fans.
