What are inverter settings?

Inverter Settings 1. To set output voltage of inverter - This is normally 230 Vac. Possible values 210V ~ 245V. 2. Used to enable/disable the internal ground relay functionality. Connection between N and PE during inverter operation. - The ground relay is useful when an earth-leakage circuit-breaker is part of the installation.

Can a battery charge a 2 amp inverter?

The only workaround I can think of, is to set utility charging amperage to the minimum your inverter will allow. 1 or 2 amps will most likely not really charge the battery that much, as usually the self consumption of these all-in-one inverters is taken from the battery anyways, and this low amperage will simply offset that discharge.

Does powermr 3600w work with a 24V AC 110V hybrid inverter?

I'm using a PowerMr 3600W DC 24V AC 110V Hybrid Inverter paired with a 24V 100AH lithium battery (8S). Here are my current settings: Given this configuration, I'm concerned that when the battery is depleted, the load should switch to utility, but it seems like the utility is charging the battery instead.
