Why do New Zealand homes need battery storage?

In most New Zealand homes, a large proportion of the energy produced by solar panels is sent back to the grid because it's generated when it's not needed, i.e., the middle of the day. However, adding home battery storage to a new or existing solar power system allows you to store your unused energy.

What is solar battery storage & how does it work?

Battery storage is a smart way to offset your electricity costs as you maximise solar energy usage and minimise reliance on the grid. When combined with a new or existing solar power system, home batteries allow you to maximize the use of your solar energy by storing excess electricity produced during the day for use at any time.

Should I add home battery storage to my solar power system?

However, adding home battery storage to a new or existing solar power system allows you to store your unused energy. This makes your solar energy setup more efficient and maximizes the benefits of your solar PV installation.

What is a solar battery system?

Our solar battery systems combine solar power with storage, providing maximum independence, efficiency, and peace of mind during power outages. We're committed to guiding customers in their journey towards energy self-sufficiency. We do this by providing reliable, sustainable, and cost-effective solar solutions that deliver long-term value.

1 day ago · Power your New Zealand home with SolarWind's high-quality solar panels, innovative wind turbines, and reliable home batteries. Achieve energy independence & save on power bills.

3 days ago · Discover ZEN Energy's custom solar systems for NZ homes and businesses.
