-----  
Can a 48V power source power a solar air conditioner?

A 48v power source can power these air conditioners. Our off-grid solar air conditioners have been designed to conserve power, reduce costs and operate reliably without ongoing maintenance costs. We're dedicated to delivery quality sustainable products with the Australian climate and standard in mind.

Which solar air conditioner is best?

Powered with If your power source is native 48V DC as part of a telecom or off grid solar application, Solar ACDC's DC48V fully DC air conditioner is your most efficient cooling choice. DC48V air conditioners can substantially reduce power supply/generation costs and battery requirements.

Why should you choose solar ACDC dc48v fully DC air conditioner?

Expect high quality, high reliability and high cost performance. Powered with If your power source is native 48V DC as part of a telecom or off grid solar application, Solar ACDC's DC48V fully DC air conditioner is your most efficient cooling choice.

What is a 48V power source?

A high quality and technically advanced solution to keeping cool and comfortable in an off grid location or for those who want to save on their cooling & heating costs. A 48v power source can power these air conditioners.

What is a 48V DC air conditioner? Using standard solar panels which produce native DC power, the 48V DC air conditioners avoid the inefficient addition of an "inverter" that converts solar DC ...

The HotSpot engineering team created the world's first DC solar air conditioner in 2007 and has led the world in solar AC design and quality manufacturing for more than 10 years.
