What is TE Connectivity's battery energy storage system (BESS) solution?

TE Connectivity's (TE) Battery energy storage system (BESS) solutions, which improves power allocation flexibility in power generation, power transmission, and power consumption, help meet this increased demand for alternative energy sources.

What is a Bess system?

BESS systems with a capacity of less than 1 MW are typically designed to fit within a single container, which includes many batteries, a battery management system, a power conversion system (PCS), and an energy management system (EMS). These all-in-one BESS systems can be scaled from utility scale to industrial and commercial applications.

What is a battery energy storage system (BESS)?

Communication and intelligent networking are key to an efficient Battery Energy Storage Systems (BESS) as they combine components from many different vendors and are themselves part of a networked smart grid. HMS solutions enable communication inside Battery Energy Storage Systems and integration into a wide range of applications.

What makes a successful Bess deployment?

At the heart of every successful BESS deployment lies a robust communication network that seamlessly connects the Battery Management System (BMS), Energy Management System (EMS), and Power Conversion System (PCS).
