What is a 3s battery?

3S batteries refer to battery packs of three individual cells connected in series(hence the "3S" designation). This series configuration boosts the overall voltage of the battery pack while remaining compact and lightweight. These batteries are quite popular in various applications,especially where power and efficiency are crucial.

How does a 3s Li battery work?

A 3S Li battery consists of three cells connected in series,each with a nominal voltage of 3.7V. Here's how the charging process works: The nominal voltage for a 3S Li battery is 11.1V (3.7V x 3 cells). Charging to this voltage represents the maximum safe level for most lithium-ion batteries,including Li-ion,LiFePO4,and LiPo.

What is a 3s LiPo battery?

LiPo,or lithium polymer batteries,are common in high-performance applications. A 3S LiPo battery consists of three lithium polymer cells connected in series. These batteries are known for their high discharge rates,enabling them to deliver high power bursts.

What is an example of a battery pack configuration?
