-----  
Why is energy storage important in Latin America and the Caribbean?

It will also be a key enabler of mass decarbonization and climate change mitigation, facilitating the expansion of variable renewable energy sources such as wind and solar while ensuring grid security. However, energy storage deployment in Latin America and the Caribbean (LAC) is still nascent.

Is pumped hydro the future of energy storage in Latin America?

Pumped hydro is the most widespread form of energy storage worldwide, but despite the abundance of hydroelectric power in use in Latin America, this technology has not been deployed in most of the region. Argentina is an exception, home to two pumped hydro storage facilities with combined capacity of almost 1 GW since the 1980s.

Will Panama be a model for energy storage in Central America?

Panama made history with its 2024 tender for 500 MW of renewables plus storage, aiming for 120-150 MW of BESS deployment. This represents the first market-based approach to energy storage in Central America, potentially serving as a model for the region.

Which energy storage technologies will be used in the future?

Other technologies, such as molten salt thermal energy storage paired with concentrated solar power generation, or compressed air energy storage, could be deployed in specific contexts. Hydrogen storage is likely poised for a larger role down the line as the technology matures. Figure 1: Annual Energy Storage Deployment, 2016-2019 (GW)

Energy storage can bring many benefits to electricity systems, including enhanced grid reliability, efficiency, and flexibility. It will also be a key enabler of mass decarbonization ...

The energy storage systems market in Latin America is expected to reach a projected revenue of US\$ 3,486.5
