What is an efficient environment-constrained deployment strategy?

An efficient environment-constrained dep .... An efficient environment-constrained deployment strategy for base stations and relay stations in Internet of Things systems The Internet is becoming ever more essential in today's society, especially in the area of the Internet of Things (IoT).

Why are base stations and relay stations important?

With the growing reliance on sensor devices (SDs) in daily life,the volume of transmitted data continues to rise. Proper deployment of base stations (BSs) and relay stations (RSs) is essential,as improper placement can prevent SDs from connecting and transmitting data effectively.

What is the deployment strategy for BS and Rs?

This article presents a deployment strategy for BSs and RSs aimed at maximizing network coverage and enabling efficient wireless transmission for SDs. The strategy begins by identifying suitable BS locations based on real-world environmental conditions, followed by RS deployment according to the BS location and its coverage radius.

How does an edge server deploy a container?

An edge server uses a Deployment-S moduleto deploy the container based on instructions issued by the central controller,notify ready-to-use to MUs,and update its status to the central controller.

Container-Based Deployment relies on a small set of foundational concepts that every practitioner should know. A container is an isolated user-space instance running on a host OS kernel that ...

Jan 23, 2023 · CONCLUSION To address the joint challenge of performing container mi-gration and base station handover, this paper proposes a coordi-nated migration-handover ...

Feb 27, 2025 · This paper introduces AutoBS, a reinforcement learning (RL)-based framework for optimal base station (BS) deployment in 6G networks. AutoBS leverages the Proximal Policy ...

Jul 2, 2024 · Signal coverage quality and intensity distribution in complex environments pose a critical challenge, particularly evident in high-density personnel areas and specialized regions ...

Dec 13, 2024 · Integrated access and backhaul (IAB) networks are a technology proposed in recent 3rd generation partnership project releases for 5th generation (5G)-new radio (NR) ...

Mar 6, 2025 · However, in practical security systems, obstacles are subject to change, necessitating the consideration of base station deployment in dynamic environments. ...

Dec 3, 2020 · In this paper, we address the joint problem of container migration and base-station handover by proposing a coordinated ...

Jun 21, 2024 · Abstract--Base station (BS) deployment is not a one-time endeavor, as when transitioning to higher frequency bands, coverage holes may arise, and the initial deployment ...

Dec 3, 2020 · In this paper, we address the joint problem of container migration and base-station handover by proposing a coordinated migration-handover mechanism, with the objective of ...

2 Increasing base station deployment density is a recognized method for improving system spectral efficiency, with macro base stations, pico-cells, femto-cells, and relay nodes serving ...

Mar 20, 2025 · Proper deployment of base stations (BSs) and relay stations (RSs) is essential, as improper placement can prevent SDs from connecting and transmitting data effectively. This ...
