What is a data center facility & critical power solution?

We provide Data Center Facility & Critical Power solutions for data center operators and enterprises in their journey towards intelligent computing, so as to power the digital era forward! Explore a modern data center facility with an integrated data center power solution that improves infrastructure efficiency, reliability, and scalable growth.

Can a DC UPS be added to a data center?

When additional racks of IT and communications equipment are required for data center growth, new DC UPS units can be added without disruption. The NetSure™ ITM integrates power conversion, battery backup and branch distribution into a compact, highly reliable power protection system.

What is a data center-optimized DC power protection system?

A data center-optimized, row-based DC power protection system is now available to help data center operators take advantage of that opportunity.

Why do data center developers need battery energy storage systems?

As a result, data center developers are working toward innovative solutions to meet the growing energy demands of their facilities while also reducing their carbon footprint. Battery Energy Storage Systems (BESS) are emerging as a critical component of modern data center infrastructure.

Battery Energy Storage Systems (BESS) are emerging as a critical component of modern data center infrastructure. By providing service to your operation's power grid, as well ...
