What is an uninterruptible power supply (UPS)?

Uninterruptible Power Supply, or UPS, is more than just a bulky box that sits quietly in a corner of your office or data centre. It ensures your critical systems keeps going even when the power grid doesn't. But what exactly is this device, and why should you care? UPS systems are not flashy, they don't make headlines, but they're indispensable.

When should you consider an uninterruptible power supply?

You should consider an Uninterruptible Power Supply if: While computers are the focus of our post today, Uninterrupted Power Supplies can also be useful for home entertainment systems, medical equipment, and home security systems, among other things that need continuous uninterrupted power.

What happens if a UPS battery fails?

A UPS commonly includes a battery that is kept charged and ready. When power fails, the battery supplies power, as long as it lasts. When the battery fails, a UPS may contain circuitry that triggers an orderly shutdown. An uninterruptible power supply may also provide line regulation, protecting against voltage variations.
