Can a power supply exceed a recommended limit?

IEEE has introduced standard, IEEE 519, which defines recommended limits. Implementing this standard requires a knowledge of the power system and other loads producing harmonics. Unfortunately, the standard can allow the same power supply to possibly exceed limits in one application and not in another.

What is a magnadc programmable DC power supply?

All MagnaDC programmable DC power supplies utilize high-frequency IGBT- and MOSFET-based power processing in a current-fed topology. This topology adds an additional stage over the conventional voltage-fed topology for enhanced control and system protection, ensuring that even under a fault condition, the power supply will self-protect.

Why do you need a power supply enclosure?

Made with chemicals safer for human health and the environment. Manufactured on farms or in facilities that protect the rights and/or health of workers. Need help? Explore versatile power supply enclosures to secure and protect devices like security cameras, timers, and more. Weatherproof designs for indoor or outdoor use.

What interfaces are available for magnadc power supplies?

MagnaDC power supplies include RS232 communication interface standard with optional LXI TCP/IP Ethernet (+LXI) and IEEE-488 GPIB (+GPIB) options. SCPI Command Listing Using the rear User 37-pin I/O connector, the MagnaDC power supplies can be completely controlled and monitored using external signals.
