Are battery energy storage systems a fire hazard mitigation strategy?

The challenges of providing effective fire and explosion hazard mitigation strategies for Battery Energy Storage Systems (BESS) are receiving appreciable attention, given that renewable energy production has evolved significantly in recent years and is projected to account for 80% of new power generation capacity in 2030 (WEO, 2023).

Are lithium-ion battery energy storage systems fire safe?

With the advantages of high energy density, short response time and low economic cost, utility-scale lithium-ion battery energy storage systems are built and installed around the world. However, due to the thermal runaway characteristics of lithium-ion batteries, much more attention is attracted to the fire safety of battery energy storage systems.

How to protect battery energy storage stations from fire?

High-quality fire extinguishing agents and effective fire extinguishing strategies are the main means and necessary measures to suppress disasters in the design of battery energy storage stations . Traditional fire extinguishing methods include isolation, asphyxiation, cooling, and chemical suppression .

Can a lithium-ion battery energy storage system detect a fire?

Since December 2019, Siemens has been offering a VdS-certified fire detection concept for stationary lithium-ion battery energy storage systems.*Through Siemens research with multiple lithium-ion battery manufacturers, the FDA unit has proven to detect a pending battery fire event up to 5 times faster than competitive detection technologies.

Stationary lithium-ion battery energy storage “thermal runaway,” occurs. By leveraging patented systems - a manageable fire risk dual-wavelength detection technology inside Lithium-ion ...

Aspirated smoke and off-gas detection systems
Lithium-ion battery cabinet protection
Siemens aspirated smoke and Off-Gas Particle detection
How does ASD "Off-Gas Particle" (OGP) detection work?
Venturi bypass flow
Insect filter Chamber flow
Dust
Intelligent Classification of Airborne Particles
Advantages of using blue and infrared light scattering
Easy Installation and Integration
Low Maintenance and Long Product Lifecycle
Features and Benefits
Applications
As its name implies - “aspirated” smoke and off-gas detection systems use an “aspirator” mounted in a detector unit. The detector connects to a sample pipe network mounted within the area or object being protected. Using the suction from the aspirator, air is continuously sampled and transported to the detection chamber for analysis for particles ...
