What is a SELCO arc flash relay?

Circuit breakers or overcurrent protection devices alone do not provide optimal protection for your personnel and equipment. A SELCO Arc-Flash Relay rapidly detects an arc flash and sends a trip signal to interrupt power in milliseconds.

Why should you use arc flash protection?

Arc Flash Detection - Explosion risk, injury to personnel and costly downtime can be avoided with an Arc-Flash Protection solution for surveillance of switchboards, transformers, and capacitor load banks, etc. Circuit breakers or overcurrent protection devices alone do not provide optimal protection for your personnel and equipment.

Can arc flash be extinguished?

It is not generally possible to extinguish a developing arc, but the damage can be limited by cutting the power to the switchboard as soon as possible. This requires fast and efficient arc flash detection systems. In case of an arc flash fault, the SELCO arc-flash relay detects and generates a tripping pulse in less than 1 millisecond.

How to protect workers from arc flash incidents?

Foot Protection: Leather boots or insulated shoes. These protective measures can effectively reduce the risk of injury in arc flash incidents and ensure workers' safety. We offer multiple optional or customized components. These configurations can be customized according to requirements to better meet security needs.
