How many homes in Sydney have solar?

In Sydney, New South Wales (NSW), solar adoption is rapidly growing, with over 71 small-scale systems installed, boasting a collective capacity of 1,895 kW as of October 2024. This adoption rate indicates that roughly 25-30% of households in Sydney have home solar systems.

How much energy does a solar system produce in Sydney?

The Clean Energy Council advise that in Sydney a solar system should on average output 3.9 kWh of energy per day for every kW of solar installed, taking into account the seasons and the weather. On any given day this figure could be extremely different. A 2kW system should output on average 7.8 kWh per day, and a 10kW system 39 kWh per day.

How many solar panels were installed in Australia in 2024?

The number of solar systems installed in 2024 was 318,721, though this figure is likely to increase slightly as more installations are lodged. The table below shows Australian solar panel install statistics by calendar year. Queensland leads all other states with 1,138,162 solar panel system installs as at 15th October 2025.

What is the average solar installation size in Australia?

Across all 4.1 million installations in Australia, the average solar installation size is 6.43kW, indicating consumer investment in systems capable of substantial household energy offset and grid contribution.

Large-scale solar (LSS) is probably best known as a solar farm, which can generate anywhere from hundreds of kilowatts to thousands of megawatts ...

Jun 5, 2025 · Battery installations with rooftop solar In Q1 2025, over 7,200 batteries were installed alongside rooftop solar systems across Australia. New South Wales led with 2,379 ...
