What is Ireland's clean export guarantee (CEG) tariff?

This page will help you find out everything you need to know about Ireland's Clean Export Guarantee (CEG) Tariff and selling electricity to the grid. All utility companies are required to pay homeowners for any surplus energy sent back to the grid from their home solar PV system.

Why should Irish businesses export solar energy?

Solar export is more than just a technical process - it's a strategic advantage for Irish businesses. In short, solar energy export can deliver both financial returns and competitive advantage. Cost reduction: By producing your own renewable power, you cut reliance on grid electricity and reduce monthly bills.

How has the feed-in tariff impacted the energy industry in Ireland?

The introduction of the Feed-in Tariff in Ireland has paved the way for greater investment in renewable energy sources. The scheme has incentivized households and businesses to install solar panels and other renewable energy technologies by offering excess energy generation payments.

How will Ireland's feed-in tariff scheme impact solar adoption in 2025?

Ireland's feed-in tariff scheme has matured into a powerful incentive for solar adoption. In 2025, homeowners are well-positioned to benefit--reducing their carbon footprint and energy costs while earning income from solar exports. If you're ready to start generating your own power and earning from it, WattCharger is here to help.

Smart Meters: Measure in Both Directions  
Standard (Pre-Smart) Meter: Estimated Values  
Old Wheel Meters: Run Backwards  
If you have one of those old meters with a spinning wheel, then yes, it does run backward when you're exporting electricity! They measure your net usage. ESB Networks and utility companies are eager to replace the remaining old meters, but as of now, some are still in use across the country, including in homes with solar installations. See more on
