What is an uninterruptible power supply (UPS)?

However, typical desktop computers, routers, and similar devices still need to be plugged into a power source all the time to work. That's where an uninterruptible power supply (UPS) comes in. Its main function is to act as a big battery that powers your devices when your electricity goes out.

Do you need an uninterruptible power supply?

But precision electronics like computers, gaming consoles, Smart TVs, and external hard drives are at far greater risk of damage from power interruptions than many home appliances. An uninterruptible power supply (UPS) is one of the best ways to protect sensitive electronics like desktop computers from irretrievable data loss and permanent damage.

How does an uninterrupted power supply work?

An uninterrupted power supply works by constantly monitoring output from the alternating current (AC) outlet the UPS is plugged into and automatically switching to direct current (DC) electricity from an onboard backup battery during interruptions such as voltage drops and blackouts.

Where is a ups plugged?

A UPS is placed in the middle of the power chain, with devices plugged directly into outlets on the unit and the UPS plugged into an AC (household) power outlet. Plugging a power strip or surge protector with multiple connected devices into a UPS is NOT recommended.

Oct 9, 2024&nbsp;&#183;&nbsp;&nbsp;Its main function is to act as a big battery that powers your devices when your electricity goes out. They range from small units that can sustain a few low-power devices to ...
