Do you need an uninterruptible power supply (UPS)?

A power failure is more than an inconvenience--it can knock out essential equipment for hours on end. If you have important electronics that have to keep running when the power's out, you'll need an uninterruptible power supply (UPS). Many smart devices have built-in battery packs, with modern laptops packing enough cells to last a whole day.

What is a ups & how does it work?

A UPS's job is to provide power to the devices connected to it if a primary power source is cut off or the voltage reaches extremely low levels. Primarily designed for things like PCs and network systems, it's basically a huge battery that works as a middle ground between standard AC power and a generator.

What is the best ups?

With these factors in mind, here are our favorite UPSs for every price point and use case. Our pick for the best UPS overall goes to the APC BR1500G Backup Battery. At 1500VA/865W, it can power most devices, including computers, external hard drives, and wireless routers, from a few minutes to several hours, depending on the total connected load.

Should I buy a br1500g ups?

If you're less interested in a UPS backup with all of the premium features, the APC BR1500G is an excellent bet. This device can also deliver over 800 watts of power, so you can safely charge any device at the speed you typically experience by plugging it directly into a wall outlet.

An Uninterruptible Power Supply Outdoor system, commonly referred to as an outdoor UPS, is a specialized device engineered to provide backup power during outages while protecting ...
