Who makes metal clad & metal enclosed switchgear?

Powercon Corporation, located in Severn, Maryland, manufactures quality Metal-Clad and Metal-Enclosed Switchgear as well as a variety of other products serving the needs of the electrical industry.

What is metal clad switchgear?

Metal-clad switchgear is typically considered top-of-the-line equipment, offering the most safety features, higher current interrupting, and more voltage options. All these options also mean that the equipment is usually larger in overall footprint. Meaning it costs significantly more than non-metal-clad switchgear or metal-enclosed switchgear.

What is a switchgear Assembly?

A switchgear assembly completely enclosed on all sides and top with sheet metal (except for ventilating openings and inspection windows) containing primary power circuit switching and/or interrupting devices with buses and connections and possibly including control and auxiliary devices.

What does a switchgear contain?

Each cubicle may contain the circuit breaker, bus bars, primary and secondary disconnecting devices, instrument transformers, instruments and relays, secondary wiring and more. The switchgear is designed so that additional circuit breakers or auxiliary cubicles may be added in the future.
