What is a mining mobile substation?

PRODUCT OVERVIEWS Mining mobile substations are divided into vehicle-mounted and sledge-mounted types. They adopt a modular design and integrate a high-voltage switch room, a transformer room, and a medium-low voltage switch room.

What is a vehicle-mounted power supply system?

They adopt a modular design and integrate a high-voltage switch room, a transformer room, and a medium-low voltage switch room. The vehicle-mounted type realizes efficient movement through special transport flatbed trucks and is suitable for power supply in surface mining.

Who designs mining power systems?

Traditionally, mining power systems have been designed by engineering companies (EPCs) and/or mining sector end-users using their knowledge of the industrial process and their experience from previous projects.

What is an integrated energy cabinet?

As one of our highlights, the integrated energy cabinet integrates multiple functions such as power distribution, environment monitoring and safety protection into one, providing a full range of energy management and protection for communication sites.
