Can a combined cooling and heating system be based on an absorption heat pump?

This study proposes a combined cooling and heating system based on an absorption heat pump, which uses a variety of clean and renewable energies, such as solar heat, geothermal, waste heat, biomass, and air-source energy, to achieve the combined cooling and heating in a wide temperature range from -20 °C to 90 °C.

Can a multi-energy complementary CCHP system be optimized collaboratively?

This paper proposes a collaborative optimization scheduling strategy for a multi-energy complementary CCHP system consisting of solar photovoltaics (PVs), wind turbines (WTs), a power generation unit (PGU), a heat pump (HP), an absorption chiller (AC).

What is multi-energy complementary distributed energy system (MECDES)?

Provided by the Springer Nature SharedIt content-sharing initiative Multi-energy complementary distributed energy system (MECDES) is an important development direction for the energy system. It has the advantages of energy

Are solar-assisted hybrid power generation systems integrated with Thermochemical fuel conversion?

Yue T, Lior N. Exergo economic analysis of solar-assisted hybrid power generation systems integrated with thermochemical fuel conversion. *Appl Energy*, 2017, 191: 204-222
Yue T, Lior N. Thermodynamic analysis of solar-assisted hybrid power generation systems integrated with thermochemical fuel conversion. *Energy*, 2017, 118: 671-683

The multi-energy complementary system of scenery, water and fire storage utilizes the combined advantages of wind energy, solar energy, water energy, coal, natural gas and other resources ...

This study proposes a multi-energy complementary heating system that uses solar energy combined with biomass energy as the main heat source, with electricity as an auxiliary ...

Multi-energy solar energy complementary cooling and heating system
