Why is Bess important in New Zealand?

The uptake of BESS in New Zealand is particularly important given that it can help to solve one of New Zealand's biggest energy challenges - meeting peak demand. In recent years, there have been ongoing concerns as to the reliability of New Zealand's energy supply following blackouts in 2021.

When is the first Bess project commissioned in New Zealand?

Whilst amendments were first made to New Zealand's Electricity Industry Participation Code 2010 (the Code) in 2018 to facilitate grid-scale BESS, the first significant (35MW) BESS project was not commissioned until March 2024.

Why should you invest in Bess in New Zealand?

This is a very welcomed approach, and in our view, the clear and stable regulatory base provides an excellent platform for building and investing into BESS in New Zealand. BESS sits in a unique position under the Code given it both discharges electricity into the market and takes in electricity while charging.

What are the benefits of a Bess project?

Firming intermittent renewable generation has several benefits: broader community benefits from improved energy security- Transpower is predicting that the risk of peak-demand blackouts will ease as the BESS industry matures. There are two key direct revenue streams for a standalone BESS project: energy arbitrage and ancillary services.
