Electric power generation is the process of producing electricity from other forms of energy - be it the mechanical energy of a moving turbine, the heat from burning fuel, sunlight ...

OverviewHistoryMethods of generationEconomicsGenerating equipmentWorld productionEnvironmental concernsCentralised and distributed generationElectricity generation is the process of generating electric power from sources of primary energy. For utilities in the electric power industry, it is the stage prior to its delivery (transmission, distribution, etc.) to end users or its storage, using for example, the pumped-storage method. Consumable electricity is not freely available in nature, so it must be "produce...

The year 2025 has become an important milestone in India"s energy transition, as the country achieved 50% non-fossil installed electricity capacity five years ahead of its Nationally ...
