Are there high-frequency inverters for WPT systems?

This paper reviews the high-frequency inverters for WPT systems, summarizes the derived topologies based on power amplifiers and H-bridge inverters, investigates the main factors restricting the development of high-frequency inverters, and analyzes the research directions for future development. 1. Introduction

What is a high-efficiency high-frequency inverter?

MHz systems such as wireless power transfer (WPT) require high-power, high-efficiency high-frequency inverters. In recent years, Gallium-Nitride high electron mobility transistors (GaN-HEMT) have been developed that are capable of high-speed switching, making it possible to realize high-efficiency high-frequency inverters.

Can high-frequency resonant inverters achieve high-power high-efficiency sinusoidal output?

[VOL.E105-C, NO.9 SEPTEMBER 2022] This paper proposes a method of improving high-frequency resonant inverters to achieve high-power, high-efficiency, low-distortion sinusoidal output in the MHz frequency band such as 13.56MHz. MHz systems such as wireless power transfer (WPT) require high-power, high-efficiency high-frequency inverters.

Why are high frequency inverters important?

With the development of high frequency inverters, the volume and weight of inductors can be reduced, but the core loss and heat generation increase with the frequency, which will lead to the deterioration of inverter working conditions and lower efficiency.
