What causes a charger to disconnect?

Problems with the power supply can also lead to a charger disconnecting. Unstable power sources or using an incompatible charger can cause disruptions in the charging process. For instance, plugging your charger into a faulty power outlet or a power strip with too many devices connected can result in an inconsistent power supply.

Why is my portable charger not working?

Before diving into fixes, let's take a look at the typical reasons a portable charger is not working. Here are the most common causes: Sometimes, the lithium battery inside degrades or becomes unstable--especially if it's been overcharged, deeply discharged too often, or exposed to extreme temperatures. Some signs of battery damage include:

What if my portable charger is broken?

Before assuming your portable charger is broken, it's smart to start with the simple stuff. Many charging problems aren't actually about the power bank, they're about what it's connected to. Loose or damaged cables are a common cause. Even if the wire looks fine on the outside, it might be broken inside, try using a different cable you know works.

Why does my iPhone charger keep disconnecting?

For both the iPhone charger keeps disconnecting and Samsung charger keeps disconnecting, the underlying issues in the charging port are similar. If you ever need reliable smartphone chargers, we highly recommend the Anker 511 Charger (Nano) with USB-C to Lightning Cable.
