What are the new EU Battery regulations?

Effective from February 18, 2027, these requirements aim to enhance product longevity and facilitate battery recycling. Which products are affected? The EU battery regulation defines different battery categories based on their application, and the requirements on removability and replaceability will only apply to two of these categories:

Can a battery be replaced?

A battery is considered readily replaceable where after its removal from a product, it can be substituted by another compatible battery without negatively affecting the functioning, the performance or the safety of the product.

What is the EU Battery regulation 2023/1542?

More specifically, in the battery space, the EU Battery Regulation (EU) 2023/1542, will introduce stringent requirements for the removability and replaceability of batteries in some battery powered products in 2027. Effective from February 18, 2027, these requirements aim to enhance product longevity and facilitate battery recycling.

Can a portable battery be removed without a specialized tool?

The end-user shall be able to remove the battery using commercially available tools without the need for specialized tools unless the specialized tools are provided free of charge. Products with portable batteries shall be accompanied with instructions and safety information on the use, removal and replacement of the batteries.

Nov 10, 2025 · ·That is where Article 320, Safety Requirements Related to Batteries and Battery Rooms comes in. Are battery containment enclosures UL 1487 certified? These products, ...
