What are RV solar panels?

Solar panels are the heart of your RV solar system. They're usually mounted on the roof and made of silicon cells that generate DC electricity when hit by sunlight. Think of them as your "fuel pump," pumping energy from the sun into your RV system. Panels come in two main types:

Can you put solar power in an RV?

Having a robust off-grid power system in your rig will give you the flexibility and confidence to camp anywhere! Putting solar on your RV is simpler than it sounds: panels capture sunlight, a controller manages the charging, batteries store the power, and an inverter (if you need AC) converts it back to 110V.

How do RV solar panels work?

Putting solar on your RV is simpler than it sounds: panels capture sunlight, a controller manages the charging, batteries store the power, and an inverter (if you need AC) converts it back to 110V. Let's break down each component and the flow of power: Solar panels are the heart of your RV solar system.

Why should you use solar in your RV?

Even if you mainly stay at RV parks, solar cuts your electrical hook-up bills. By keeping batteries topped off, solar also extends battery lifespan. Batteries don't like sitting at low charge. Charging from the sun keeps them healthy and means you're less likely to be stranded with a dead battery.
