Can a 23-level multilevel inverter improve solar power quality?

The main objective of the proposed work is to develop a DVR integrated with a 23-level multilevel inverter to enhance the power quality. In addition, an improved INC-MPPT technique is designed for the boost converter for maximum energy extraction from the solar PV modules.

Can a multilevel inverter be used to power a solar system?

To mitigate this constraint, a feasible solution involves integrating the solar system with the electrical grid through a multilevel inverter. This approach presents numerous benefits, such as diminished harmonic distortion, decreased switching losses, and enhanced electromagnetic compatibility [16,17,18].

Can a solar PV integrated DVR improve power quality?

In this article, a solar PV integrated DVR with a novel multilevel inverter is introduced to address the power quality issues in the grid. The main objective of the proposed work is to develop a DVR integrated with a 23-level multilevel inverter to enhance the power quality.

Why do inverters use filters?

The use of filters in systems has increased due to the significant improvement in power quality at the inverter output and the power delivered to the loads or the grid as a result of reducing the ripple factor on the DC side.
