-----  
Why is solar power important in Hamburg?

Solar power is a crucial driving factor in both Hamburg and all of Germany to reach these renewable energy transition goals. Along with wind power and the generation of energy from biomass, solar power is one of the most important sources of clean, environmentally friendly, renewable energy.

Why is solar power growing in Germany?

In 2004, Germany was the first country, together with Japan, to reach 1 GW of cumulative installed PV capacity. Since 2004 solar power in Germany has been growing considerably due to the country's feed-in tariffs for renewable energy, which were introduced by the German Renewable Energy Sources Act, and declining PV costs.

How much solar power does Germany have?

By 2011, solar PV provided 18 TWh of Germany's electricity, or about 3% of the total. That year the federal government set a target of 66 GW of installed solar PV capacity by 2030, to be reached with an annual increase of 2.5-3.5 GW, and a goal of 80% of electricity from renewable sources by 2050.

How big is Germany's solar industry?

The German solar industry reached a milestone at the start of the year, as the total capacity of all installed solar power systems surpassed 100 gigawatts (GW), according to industry association BSW Solar.

Overview History Governmental policies Statistics Companies See also External links During the Reagan administration in the United States, oil prices decreased and the US removed most of its policies that supported its solar industry. Government subsidies were higher in Germany (as well as Japan), which prompted the solar industry supply chain to begin moving from the US to those countries. Germany was one of the first countries to deploy grid-scale PV power. In 2004, Germany was th...
