How strong are aluminum electrolytic capacitors?

Upon delivery most of our aluminum electrolytic capacitors are enveloped by a shrinking sleeve. The minimum breakdown strength for a new sleeve is 2500 V AC or 3500 V DC and the insulation resistance is at least 100 M. IEC 60384-4 specifies corresponding test methods.

What is the international standard for aluminum electrolytic capacitors?

The international standard for aluminum electrolytic capacitors is IEC 60384-4. The sectional specification mentioned above is complemented by a set of detail specifications that applies to specific design types (e.g. electrolytic capacitors with axial wire leads).

Can aluminum electrolytic capacitors be omitted?

If the capacitors meet the leakage current requirements without preconditioning, this procedure can be omitted. The oxide layer of aluminum electrolytic capacitors may deteriorate when they are stored without an externally applied voltage, especially at higher temperatures.
