What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS) provides a source of power for the equipment it protects. If there is a disruption to power, the UPS has an on-board battery to automatically supply to electrical equipment until the disruption is over or back-up generators kick-in. What is a WIMES UPS?

What is an industrial UPS system?

Industrial UPS systems are designed for critical process control in a harsh environment, like a power plant, oil refinery, manufacturing plant etc. Schneider Electric's Galaxy V Series UPS is a sustainable, efficient, adaptive, modular, and resilient 3-Phase UPS System for data center, commercial, and industrial applications.

What is the difference between a generator and a ups?

A generator provides standby power until the mains power can be reinstated during a power outage. This is supported by a UPS (Uninterruptible Power Supply) which ensures a seamless transition from your mains power to your backup power supply. Batteries provide power to your UPS and generator. What does UPS commissioning involve?

How does an UPS system work?

When initiated the UPS will send a signal to the generator to start up. Once the generator is running, the UPS will switch to generator power. When the power outage is over and grid power is restored, the UPS will return to utility power and recharge its batteries. The generator will then shut down. How do UPS systems work?
